

<b>Data type</b>	<b>Description</b>
CHAR(size)	A FIXED length string (can contain letters, numbers, and special characters). The <i>size</i> parameter specifies the column length in characters - can be from 0 to 255. Default is 1
VARCHAR(size)	A VARIABLE length string (can contain letters, numbers, and special characters). The <i>size</i> parameter specifies the maximum column length in characters - can be from 0 to 65535
BINARY(size)	Equal to CHAR(), but stores binary byte strings. The <i>size</i> parameter specifies the column length in bytes. Default is 1
VARBINARY(size)	Equal to VARCHAR(), but stores binary byte strings. The <i>size</i> parameter specifies the maximum column length in bytes.
TINYBLOB	For BLOBs (Binary Large Objects). Max length: 255 bytes
TINYTEXT	Holds a string with a maximum length of 255 characters
TEXT(size)	Holds a string with a maximum length of 65,535 bytes
BLOB(size)	For BLOBs (Binary Large Objects). Holds up to 65,535 bytes of data
MEDIUMTEXT	Holds a string with a maximum length of 16,777,215 characters
MEDIUMBLOB	For BLOBs (Binary Large Objects). Holds up to 16,777,215 bytes of data
LONGTEXT	Holds a string with a maximum length of 4,294,967,295 characters
LONGBLOB	For BLOBs (Binary Large Objects). Holds up to 4,294,967,295 bytes of data
ENUM(val1, val2, val3, ...)	A string object that can have only one value, chosen from a list of possible values. You can list up to 65535 values in an ENUM list. If a value is inserted that is not in the list, a blank value will be inserted. The values are sorted in the order you enter them
SET(val1, val2, val3, ...)	A string object that can have 0 or more values, chosen from a list of possible values. You can list up to 64 values in a SET list

## Numeric Data Types

Data type	Description
BIT( <i>size</i> )	A bit-value type. The number of bits per value is specified in <i>size</i> . The <i>size</i> parameter can hold a value from 1 to 64. The default value for <i>size</i> is 1.
TINYINT( <i>size</i> )	A very small integer. Signed range is from -128 to 127. Unsigned range is from 0 to 255. The <i>size</i> parameter specifies the maximum display width (which is 255)
BOOL	Zero is considered as false, nonzero values are considered as true.
BOOLEAN	Equal to BOOL
SMALLINT( <i>size</i> )	A small integer. Signed range is from -32768 to 32767. Unsigned range is from 0 to 65535. The <i>size</i> parameter specifies the maximum display width (which is 255)
MEDIUMINT( <i>size</i> )	A medium integer. Signed range is from -8388608 to 8388607. Unsigned range is from 0 to 16777215. The <i>size</i> parameter specifies the maximum display width (which is 255)
INT( <i>size</i> )	A medium integer. Signed range is from -2147483648 to 2147483647. Unsigned range is from 0 to 4294967295. The <i>size</i> parameter specifies the maximum display width (which is 255)
INTEGER( <i>size</i> )	Equal to INT( <i>size</i> )
BIGINT( <i>size</i> )	A large integer. Signed range is from -9223372036854775808 to 9223372036854775807. Unsigned range is from 0 to 18446744073709551615. The <i>size</i> parameter specifies the maximum display width (which is 255)
FLOAT( <i>size, d</i> )	A floating point number. The total number of digits is specified in <i>size</i> . The number of digits after the decimal point is specified in the <i>d</i> parameter. This syntax is deprecated in MySQL 8.0.17, and it will be removed in future MySQL versions
FLOAT( <i>p</i> )	A floating point number. MySQL uses the <i>p</i> value to determine whether to use FLOAT or DOUBLE for the resulting data type. If <i>p</i> is from 0 to 24, the data type becomes FLOAT(). If <i>p</i> is from 25 to 53, the data type becomes DOUBLE()
DOUBLE( <i>size, d</i> )	A normal-size floating point number. The total number of digits is specified in <i>size</i> . The number of digits after the decimal point is specified in the <i>d</i> parameter
DOUBLE PRECISION( <i>size, d</i> )	
DECIMAL( <i>size, d</i> )	An exact fixed-point number. The total number of digits is specified in <i>size</i> . The number of digits after the decimal point is specified in the <i>d</i> parameter. The maximum number for <i>size</i> is 65. The maximum number for <i>d</i> is 30. The default value for <i>size</i> is 10. The default value for <i>d</i> is 0.
DEC( <i>size, d</i> )	Equal to DECIMAL( <i>size,d</i> )

[https://www.w3schools.com/MySQL/mysql\\_datatypes.asp](https://www.w3schools.com/MySQL/mysql_datatypes.asp)

Data type	Description
DATE	A date. Format: YYYY-MM-DD. The supported range is from '1000-01-01' to '9999-12-31'
DATETIME( <i>fsp</i> )	A date and time combination. Format: YYYY-MM-DD hh:mm:ss. The supported range is from '1000-01-01 00:00:00' to '9999-12-31 23:59:59'. Adding DEFAULT and ON UPDATE in the column definition to get automatic initialization and updating to the current date and time
TIMESTAMP( <i>fsp</i> )	A timestamp. TIMESTAMP values are stored as the number of seconds since the Unix epoch ('1970-01-01 00:00:00' UTC). Format: YYYY-MM-DD hh:mm:ss. The supported range is from '1970-01-01 00:00:01' UTC to '2038-01-09 03:14:07' UTC. Automatic initialization and updating to the current date and time can be specified using DEFAULT CURRENT_TIMESTAMP and ON UPDATE CURRENT_TIMESTAMP in the column definition
TIME( <i>fsp</i> )	A time. Format: hh:mm:ss. The supported range is from '-838:59:59' to '838:59:59'
YEAR	A year in four-digit format. Values allowed in four-digit format: 1901 to 2155, and 0000. MySQL 8.0 does not support year in two-digit format.

Ustvaritev

Baze:

```
CREATE DATABASE imeBaze;
```

Tabele:

```
CREATE TABLE Zaposleni (  
Employee_ID INT,  
First_Name VARCHAR (50),  
Last_name VARCHAR (50),  
Placa DECIMAL (6, 2)  
);
```

Izbris:

Baze:

```
DROP DATABASE imeBaze;
```

Tabele:

```
DROP TABLE imeTabele;
```

Kreiramo vrstice:

```
INSERT INTO Zaposleni  
VALUES (2, "Nika", "Kovač", 6.7), (3, "Miha", "Jesen", 6.6);  
SELECT * FROM Zaposleni;
```

SELECT:

```
SELECT * FROM Zaposleni;
```

```
SELECT First_Name, Placa;
```

```
SELECT DISTINCT First_Name FROM Zaposleni;
```

## The MySQL WHERE Clause

The **WHERE** clause is used to filter records.

It is used to extract only those records that fulfill a specified condition.

```
SELECT First_Name  
FROM Zaposleni  
WHERE Placa > 6.0;
```

← številke ne pišemo v  
narekovajih

```
SELECT First_Name  
FROM Zaposleni  
WHERE First_name != "Metka";
```

← Character-ji v narekovajih

```
SELECT First_Name
```

```
FROM Zaposleni
```

```
WHERE First_name != "Metka" AND Last_Name != "Novak";
```

```
SELECT First_Name
```

```
FROM Zaposleni
```

```
WHERE First_name != "Metka" OR Last_Name != "Novak";
```

```
SELECT First_Name
```

```
FROM Zaposleni
```

```
WHERE NOT First_name = "Metka" AND Last_Name = "Novak";
```

2.

!= ali <>  
pomeni da  
nista enaka

```
SELECT First_Name
```

```
FROM Zaposleni
```

```
WHERE NOT First_name = "Metka" AND NOT Last_Name = "Novak";
```
